Our Fire Safety Services

Our fire consultancy service provides an opportunity for us to have a discussion with you in order to determine and comprehend the necessary fire safety measures for your establishment, as well as how other external works may relate to our services.

This consultation not only assists us in fully grasping your specific needs, which can vary from project to project but also enables you to gain valuable knowledge and better comprehension of the significance of passive fire protection and protection measures.

Pre Construction Consultancy

This is centred around providing fire safety to new-build projects. We as a fire protection company can be involved from the design stage to design and implement fireproofing solutions. This reduces the chance of hurdles along the way during construction which can delay your project and increase costs.

Fire Strategy Creation

We create tailor-made fire safety service solutions to your fire-stopping problems to ensure maximum safety for your building. We examine any existing floor plans for the building to create strategically placed fire exit routes and any potential fire risks which may require further action.

Fire Safety Signage

Our company offers a wide selection of fire safety signs, including important ones like "fire exit" and "keep clear," to protect the safety of everyone in your building. We also conduct inspections and surveys of your premises to determine where the signs should be placed and how many are needed to meet safety regulations.

Regulations for Fire Safety Services

In the UK, fire safety signage is regulated primarily by the Regulatory Reform (Fire Safety) Order 2005, which applies to England and Wales. Similar legislation exists in Scotland and Northern Ireland. Additionally, there are British Standards (BS) and guidance documents that provide further recommendations and requirements for fire safety signage. Here are the key regulations and standards concerning fire safety signage in the UK:

1. Regulatory Reform (Fire Safety) Order 2005:

- The Fire Safety Order requires the responsible person (e.g., building owner, employer, landlord) to undertake a fire risk assessment and implement appropriate fire safety measures, including the provision of fire safety signage.
- It specifies that fire safety signs should be provided where necessary for the safety of employees and other relevant persons, indicating escape routes, emergency exits, fire alarm call points, fire fighting equipment, and other essential information.

2. British Standards (BS):

- BS 5499: Part 4 provides recommendations for the design, installation, and use of fire safety signs, including those for escape routes, fire-fighting equipment, and emergency exits.
- BS 5266: Part 1 outlines requirements for emergency lighting and provides guidance on the use of illuminated fire safety signs to enhance visibility during a power failure or low lighting conditions.

3. Health and Safety (Safety Signs and Signals) Regulations 1996:

- While not specific to fire safety signage, these regulations set out requirements for the design and use of safety signs in workplaces, including those related to fire safety. Fire safety signs should comply with the principles outlined in these regulations.

See gov.uk for more information

Fire Safety Service Timeline

Pre Construction Consultancy

We will be involved from the design stage to design and implement fireproofing solutions.

1

Fire Strategy Creation

We create strategically placed fire exit routes and create tailor-made fire safety service solutions.

2

Fire Safety Signage

We have a selection of fire safety signs, including important ones like "fire exit" and "keep clear".

3

Handover

Once the project is complete, we will create and send over all final reports as well as any invoices.

4

What To Expect From Our Team

Our team will discuss the documents provided for the building to create a pre construction/fire strategy, depending on your needs. We will carefully examine the building structure and the current fire safety measures in place to enhance its effectiveness.

What we'll work on:

Building Fire Strategy

Fire Exit Routes

Fire Door Signs

Final Documentation

Following Completion of the Fire Safety Services you will receive the following documentation:

- Fire strategy documents
- Completed works report
- Health & Safety reports
